## ■ Diffractive topologies

elastic  
scattering

single  
diffraction

central  
diffraction

double  
diffraction

## ■ Diffractive signatures

- large rapidity gap
  - forward (anti-)proton
- ### ■ Hard diffraction: diffraction + hard scale
- ### ■ Hard diffractive topologies
- single diffraction
  - central diffraction (double pomeron exchange)
  - central exclusive production
  - jet-gap-jet

# Mechanism of hard diffraction

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

## Resolved pomeron

- Ingelman-Schlein model
- pomeron has partonic structure

## Soft colour interactions

- QCD-inspired model
- additional gluon exchanges screen the color flow

# Kinematics

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- $\xi$  – momentum fraction of the proton carried by the pomeron
- $t$  – squared four-momentum transferred from the proton
- $\beta$  – momentum fraction of the pomeron carried by the interacting parton

■  $M_X$  – diffractive mass

# Equivalent photons

(slides borrowed from Victor Gonçalves)

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

## Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

## Equivalent Photon Approximation

- Consider a charged nucleus at rest. The associated electromagnetic field can be represented by:

# Equivalent photons

(slides borrowed from Victor Gonçalves)

## Equivalent Photon Approximation

- As a charged nucleus moves with nearly the speed of light, the electromagnetic field becomes transverse to its velocity.

# Equivalent photons

(slides borrowed from Victor Gonçalves)

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

## Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

## Equivalent Photon Approximation

- Since the electric and magnetic field associated to the nucleus take on the same absolute value, this transverse electromagnetic field can be simulated by an equivalent swarm of photons <sup>a</sup>.

<sup>a</sup>E. Fermi (1924), E. J. Williams (1933), C. F. Von Weizacker (1934)

# Two-photon processes

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

## Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Two-photon processes can be computed within QED
- Exclusive  $\gamma\gamma \rightarrow ll$ 
  - Standard candle for photon-induced physics
  - Non-negligible background to Drell-Yan like reactions
- Test of SM  $\gamma WW$  and  $\gamma\gamma WW$  couplings
- Searches for new physics
- QCD:
  - absorptive corrections
  - dissociation

# ATLAS Detector

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

## Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

...but also forward detectors providing measurements  
of forward intact protons: **ALFA** and **AFP**

# Soft diffraction

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

non-diffractive  
interaction

elastic  
scattering

single  
diffraction

central  
diffraction

double  
diffraction

- Calorimeter used to measure rapidity gaps

- Separation of diffractive processes from non-diffractive processes
- Full separation of single and double diffraction not possible

# Diffractive jets

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Low pile-up data from 2010 ( $\sqrt{s} = 7$  TeV)
- Rapidity gap based on
  - tracks ( $|\eta| < 2.5$ ,  $p_T > 200$  MeV)
  - calorimeter cells ( $|\eta| < 4.8$ )
- Proton energy loss and diffractive mass

$$\xi = M_X^2/s \quad \tilde{\xi} = \frac{\sum p_T e^{\pm\eta}}{\sqrt{s}}$$

# Diffractive jets

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Evidence of diffractive component
- Good description by Pythia8
- Gap survival probability:  $0.16 \pm 0.04$  (stat)  $\pm 0.08$  (exp. syst.)

# Two-photon processes

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Exclusive  $\gamma\gamma \rightarrow ll$ 
  - Standard candle for photon-induced physics
  - QED calculations
  - QCD corrections
  
- Exclusive  $\gamma\gamma \rightarrow VV$ 
  - Tests of Standard Model
  - Searches for new physics

# $\gamma\gamma \rightarrow \mu\mu$ in $pp$

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

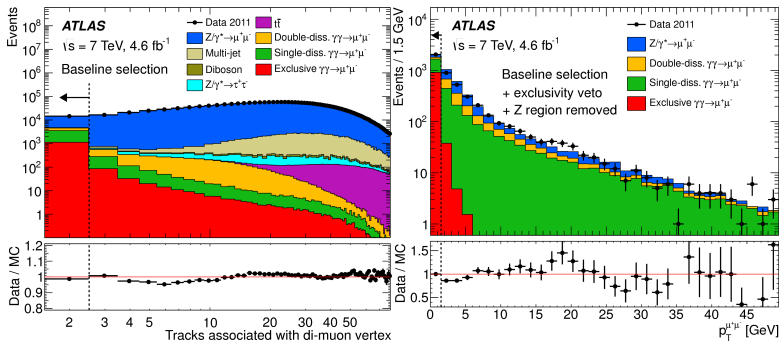

# $\gamma\gamma \rightarrow \mu\mu$ in $pp$ : event selection

## ■ Preselection:

- muons:  $p_T > 10$  GeV,  $|\eta| < 2.4$ ,  $M_{\mu\mu} > 20$  GeV
- electrons:  $p_T > 11$  GeV,  $|\eta| < 2.4$ ,  $M_{ee} > 24$  GeV

## ■ Exclusive selection:

- 3 mm vertex longitudinal isolation (efficiency = 74%)
- $p_T$  of the pair below 1.5 GeV

# $\gamma\gamma \rightarrow \mu\mu$ in $pp$ : results

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Agreement with calculations (absorptive corrections are important)
- Measurement also at 13 TeV

$$\gamma\gamma \rightarrow WW \rightarrow e\nu\mu\nu$$

in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Standard Model signal
  - $3\sigma$  significance
- New physics searches
  - $p_T^{e\mu} > 120 \text{ GeV}$
  - Data: 1
  - Background:  $0.37 \pm 0.13$
  - SM Signal:  $0.37 \pm 0.04$
  - limits on anomalous  $\gamma\gamma WW$  couplings

# $\gamma\gamma$ processes in heavy ion collisions

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- $p_T > 5 \text{ GeV}$   
 $|\eta| < 2.4$   
(both muons)
- $M_{\mu\mu} > 10 \text{ GeV}$
- Muons form  
a vertex
- No other tracks
- 12069 events  
after selection

# Acoplanarity

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- No QED radiative corrections in MC (Starlight)
- Two variants assumed:
  - tail is background
  - tail is due to FSR
- The background fraction with acoplanarity < 0.08 is 2 – 4%.
- The result is average of the two possibilities
- Difference is taken as systematic uncertainty

# Results

Forward Physics

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Elastic scattering of two photons
- Quantum effect: not present in classical theory
- Very small cross section
- No direct observation so far
- Possible channel to study new physics

# Event selection

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Dedicated trigger: photons + clean event

Selection:

- Two photons,  
 $E_T > 3$  GeV
- $M_{\gamma\gamma} > 6$  GeV
- Exclusivity: no tracks
- $p_T^{\gamma\gamma} < 6$  GeV
- Acoplanarity:  
 $(1 - \Delta\Phi_{\gamma\gamma}/\pi) < 0.01$

Selection	$\gamma\gamma \rightarrow e^+e^-$	CEP $gg \rightarrow \gamma\gamma$	Hadronic fakes	Other fakes	Total background	Signal	Data
Preselection	74	4.7	6	19	104	9.1	105
$N_{\text{trk}} = 0$	4.0	4.5	6	19	33	8.7	39

proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- Four momentum transfer squared

$$t = (p-p')^2 \approx -(p\theta)^2 = -p^2(\theta_x^2 + \theta_y^2)$$

- Optical theorem

$$\sigma_{\text{tot}} = 4\pi \text{Im} f_{\text{el}} \Big|_{t \rightarrow 0}$$

- Theoretical input

$$\rho = \frac{\text{Re} f_{\text{el}}}{\text{Im} f_{\text{el}}} \Big|_{t \rightarrow 0}$$

- Total cross section

$$\sigma_{\text{tot}}^2 = \frac{16\pi(\hbar c)^2}{1 + \rho^2} \frac{d\sigma_{\text{el}}}{dt} \Big|_{t \rightarrow 0}$$

- Elastic scattering

$$\frac{d\sigma_{\text{el}}}{dt} = \frac{1}{16\pi} \left| f_N(t) + f_C(t) e^{i\alpha\phi(t)} \right|^2$$

- Fit formula:

$$\frac{d\sigma}{dt} = \sigma_{\text{tot}}^2 \frac{1 + \rho^2}{16\pi(\hbar c)^2} \times \exp(-B|t|)$$

- Absolute luminosity

$$\xi_{\text{cal}} = \frac{\sum p_T e^{\pm\eta}}{\sqrt{s}}$$

ATL-PHYS-PUB-2017-012

- Presence of diffractive events clearly seen
- Enhancement in the AFP acceptance region
- Overall sample is dominated by pile-up related background

# Example: $\gamma\gamma \rightarrow \gamma\gamma$

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- couplings predicted by extra-dim, composite Higgs models:  $10^{-14} - 10^{-13}$
- trigger: 2 high  $p_T$  central photons, no AFP trigger needed
- high mass  $\rightarrow$  not need to be very close to the beam

# Exclusivity selection

Forward Physics  
in the ATLAS  
Experiment  
at the LHC

Rafał Staszewski

Introduction

Measurements  
w/o forward  
proton tagging

Proton tagging:  
ALFA detectors

Proton tagging:  
AFP detectors

- main background: non-diff  $\gamma\gamma +$  pile-up protons
- exclusivity selection kills all background (even without ToF)
- for  $300 \text{ fb}^{-1}$  and  $\mu = 50$ :  $<1$  background events for 15.1 (3.8) signal events for anomalous coupling of  $2 \cdot 10^{-13}$  ( $10^{-13}$ )

Rich forward physics programme of ATLAS:

- elastic scattering (total cross section,  $\rho$ , luminosity)
- soft diffraction
- hard diffraction
- two-photon processes
- new physics

Experimental methods

- rapidity gaps (calorimeter, tracks)
- measurement of forward protons (ALFA, AFP)
